Profile

Computer Science undergraduate with a versatile skill set spanning full-stack software engineering, DevOps, and UI/UX design. Hands on experience designing user interfaces in Figma, building scalable applications, and managing cloud workflows with Docker and modern CI/CD tools. Also comfortable with infrastructure work involving Kubernetes and cloud deployment pipelines. Eager to apply and expand diverse technical skills through an impactful engineering internship.

Education

Bachelor of Science in Computer Science
Trincomalee Campus, Eastern University, Sri Lanka
Current GPA : 3.78

2023 – Present

Technical Skills

Languages : Java, Python, JavaScript, TypeScript

Design : Figma, Prototyping, User Research, UI/UX Prototyping

Frontend : React, Next.js, HTML, CSS, Tailwind CSS

Backend & APIs : Node.js, Express, REST API Integration

Databases : PostgreSQL, MongoDB

Testing & QA : Selenium, Postman

DevOps : Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, ArgoCD, AWS, Git, Linux

Projects

University Website Redesign Prototype

Figma

[FigmaLink](#)

- Redesigned homepage of **UGC Sri Lanka** website in Figma, targeting improved navigation clarity and modern UI over the existing site as an academic HCI project.
- Built flexible, well structured design source with clear layout hierarchy and co-located visual assets (images, SVG) for consistent visual design.
- Applied Human–Computer Interaction (HCI) principles to create accessible layouts, consistent visual hierarchy, and reusable UI components.

AI-Powered Applicant Tracking System (ATS)

React, TypeScript, Puter

[source code](#)

- Built an AI-powered Resume Analyzer (ATS) that evaluates resumes against job descriptions, generating ATS scores, identifying skill gaps, and providing AI-powered improvement recommendations.
- Developed the application using React, JavaScript, TypeScript, Vite, Tailwind CSS, PDF.js, Zustand, and Puter AI, implementing resume parsing, job-description matching, and AI-driven feedback generation.
- Designed a responsive user interface with drag-and-drop resume upload, real-time analysis, and structured feedback reports to improve resume quality and job-role alignment.

Multi-Vendor E-Commerce Application

Next.js, JavaScript, PostgreSQL, Clerk, Stripe

[source code](#)

- Built and deployed a full-stack multi-vendor e-commerce platform using Next.js, enabling multiple vendors to manage products, inventory, and customer orders within a unified marketplace.
- Developed both the frontend and backend using Next.js and JavaScript, implementing server-side rendering, API routes, authentication, and database integration for end-to-end functionality.
- Engineered core e-commerce features including vendor dashboards, product catalog management, shopping cart, secure checkout workflow, and responsive UI, delivering a scalable marketplace experience.

KubeStock Cloud-Native Inventory Management System

Docker, Kubernetes, Terraform, ArgoCD, AWS,

[source code](#)

- Built cloud native inventory system with **microservices architecture**, splitting warehouse operations into five backend services.
- Set up full DevOps pipeline covering infra automation (**Terraform**), container orchestration (**Kubernetes** on AWS), and GitOps deployment (**ArgoCD**) with strong security practices.

- Delivered a production ready system with automated CI/CD, monitoring, and auto scaling built in.

GitOps CI/CD Pipeline for Go Application

Go, Docker, Kubernetes, Helm, GitHub Actions

[source code](#)

- Built a Go-based web application with a full DevOps CI/CD pipeline, enabling automated build, test, and deployment workflows for consistent and reliable delivery.
- Set up dual deployment model supporting both raw Kubernetes manifests and Helm chart templating, giving flexibility between simple and parameterized deployments.
- Automated CI/CD pipeline with **GitHub Actions** covering build, test, and deploy steps, backed by unit tests validating core app behavior before release.

High-Availability AWS Architecture Deployment

Node.js, Express, MySQL, Nginx, systemd, AWS

[source code](#)

- Designed and deployed production ready cloud architecture from scratch, with custom VPC across 2 Availability Zones (2 public, 2 private subnets) for high availability and fault tolerance.
- Set up Application Load Balancer and Auto Scaling Group for traffic distribution and automatic scaling, RDS MySQL in private subnets for secure data layer, and Nginx reverse proxy with systemd for production process management.
- Secured and monitored full deployment with HTTPS via AWS ACM, custom domain through Route 53, CloudWatch monitoring with SNS alerts, and golden image (AMI) for repeatable deployments.

Intelligent Timetable Generator

Prolog, SWI Prolog, Logic Programming

[source code](#)

- Built expert system in **Prolog** to auto generate conflict free university course timetables, respecting lecturer availability, course hour requirements, and practical or theory course relationships.
- Designed constraint prioritization logic that schedules most constrained courses first (fewest available slots), reducing backtracking and improving solver efficiency.
- Enforced real world staffing rules with dual staff validation for practical courses (requiring both instructor and demonstrator availability), and used dynamic memory predicates for incremental scheduling with clean re run support.

Achievements

Cre8X 2.0 – National UI/UX Design Competition (Top 8 Finalist)

2025

General Sir John Kotelawala Defence University, Sri Lanka

- Designed complete UI/UX solution across 3 rounds, including Figma concept, functional frontend prototype, and live 4 hour design challenge, as part of **Team UXperts Pro**. Placed Top 8 among competing teams nationwide.

Finalist – Yarl Geek Senior Challenge (YGC)

2025

Yarl IT Hub

- Co-developed **UNIGO**, mobile app solving campus accommodation, transport, food, and vendor access for students. Validated idea via user research, completed Uki Startup Essentials Boot Camp, and reached Top 20 out of 75 teams in national pitching round.

Certifications & Professional Training

WSO2 – Linux System Administration & DevOps Engineering

06/2025 – 01/2026

Industry-Sponsored DevOps Training Program

- Completed 6-month hands on training covering Linux administration, Docker, Kubernetes, Terraform, Ansible, cloud infrastructure, and core DevOps practices.
- Applied learned technologies in group capstone project, building and deploying a real world cloud native solution from scratch.
- Gained practical industry exposure through mentorship and collaborative teamwork, strengthening end to end DevOps and cloud engineering skills.

Soft Skills

Problem Solving | Analytical Thinking | Team Collaboration | Time Management | Communication | Adaptability
