Profile

Software Engineer Intern with a strong passion for DevOps and cloud-native engineering, backed by hands-on experience across full-stack development and infrastructure automation. Built four DevOps-focused projects spanning high-availability AWS architecture, Kubernetes orchestration, and GitOps CI/CD pipelines, alongside production experience with Next.js, Nest.js, Docker, and AWS. Passionate about building reliable, scalable systems and continuously deepening expertise in cloud infrastructure and automation.

Education

Bachelor of Science in Computer Science
Trincomalee Campus, Eastern University, Sri Lanka
Current GPA : 3.78 / 4.0

2023 – Present

Projects

High-Availability AWS Architecture Deployment

Node.js, MySQL, Nginx, AWS

[source code](#)

- Designed and deployed a production-ready backend architecture from scratch, with a custom VPC across 2 Availability Zones (public/private subnets) for high availability.
- Set up an Application Load Balancer and Auto Scaling Group for traffic distribution, with RDS MySQL in private subnets as the secure data layer.
- Secured and monitored the deployment with HTTPS (AWS ACM), Route 53 custom domain, CloudWatch alerts, and a golden AMI image for repeatable server deployments.

KubeStock Cloud-Native Inventory Management System

Docker, Kubernetes, Terraform, ArgoCD

[source code](#)

- Built a cloud-native inventory system with a microservices architecture, splitting warehouse operations into five back-end services.
- Set up infra automation (Terraform), container orchestration (Kubernetes on AWS), and GitOps deployment (ArgoCD) with strong security practices.
- Delivered a production-ready system with automated CI/CD, monitoring, and auto scaling built in.

GitOps CI/CD Pipeline for Go Application

Go, Docker, Kubernetes, Helm, GitHub Actions

[source code](#)

- Built a Go-based web application with a full DevOps CI/CD pipeline, enabling automated build, test, and deployment workflows for consistent, reliable delivery.
- Set up a dual deployment model supporting both raw Kubernetes manifests and Helm chart templating, giving flexibility between simple and parameterized deployments.
- Automated the CI/CD pipeline with GitHub Actions covering build, test, and deploy steps, backed by unit tests validating core app behavior before release.

SitePulse – AI-Powered SEO Audit & Rank Tracking Platform

React, Express, MongoDB, Gemini AI

[source code](#)

- Built a real-time audit pipeline using Browserbase and Playwright for headless browser scraping, with Google's Gemini AI scoring SEO, Performance, Accessibility, and Best Practices.
- Implemented automated daily rank tracking via node-cron, with historical position charts and competitor visibility.
- Designed a full dark/light themed UI in React 19, TypeScript, and Tailwind CSS 4, with JWT-based auth and plan-based usage limits enforced server-side.

AI-Powered Applicant Tracking System (ATS)

React, TypeScript, Puter

[source code](#)

- Built an AI-powered resume analyzer that parses resumes, matches them against job descriptions, and generates structured ATS scores and feedback.
- Implemented resume parsing (PDF.js) and state management (Zustand) logic to handle document processing and real-time analysis pipelines.
- Integrated Puter AI for feedback generation, structuring the request/response flow between client and AI backend.

Multi-Vendor E-Commerce Application	<i>Next.js, JavaScript, PostgreSQL, Clerk, Stripe</i>	source code
- Built and deployed a full-stack multi-vendor e-commerce platform using Next.js, enabling multiple vendors to manage products, inventory, and customer orders within a unified marketplace. - Developed both frontend and backend with Next.js and JavaScript, implementing server-side rendering, API routes, authentication, and database integration for end-to-end functionality. - Engineered core e-commerce features including vendor dashboards, product catalog management, shopping cart, and secure checkout workflow, delivering a scalable marketplace experience.		

University Website Redesign Prototype	<i>Figma</i>	Figma file
- Redesigned the homepage of the UGC Sri Lanka website in Figma, targeting improved navigation clarity and a modern UI over the existing site as an academic HCI project. - Built a flexible, well-structured design source with clear layout hierarchy and co-located visual assets (images, SVG) for consistent visual design. - Applied Human-Computer Interaction (HCI) principles to create accessible layouts, consistent visual hierarchy, and reusable UI components.		

Experience

Software Engineer Intern <i>X4 Digital Labs</i>	Jul 2026 – Present <i>Kegalle, Sri Lanka</i>
- Developing and maintaining full-stack features using Next.js on the frontend and Nest.js on the backend for production applications. - Containerizing services with Docker and supporting deployment and infrastructure workflows on AWS. - Collaborating with the engineering team on code reviews, feature delivery, and day-to-day DevOps practices.	

Achievements

Cre8X 2.0 – National UI/UX Design Competition (Top 8 Finalist) <i>General Sir John Kotelawala Defence University, Sri Lanka</i>	2025
Delivered a complete UI/UX solution across 3 competition rounds – Figma concept, functional prototype, and a live 4-hour design challenge – as part of Team UXperts Pro, placing Top 8 nationally.	
Finalist – Yarl Geek Senior Challenge (YGC) <i>Yarl IT Hub</i>	2025
Co-developed UNIGO, a mobile app solving campus accommodation, transport, food, and vendor access for students; validated the idea through user research and reached the Top 20 of 75 teams nationally.	

Certifications & Professional Training

WS02 – Linux System Administration & DevOps Engineering <i>Industry-Sponsored DevOps Training Program</i>	06/2025 – 01/2026
- Completed a 6-month hands-on program covering Linux administration, Docker, Kubernetes, Terraform, Ansible, and core DevOps and cloud infrastructure practices. - Applied the learned technologies in a group capstone project, building and deploying a real-world cloud-native solution from scratch. - Gained practical industry exposure through mentorship and collaborative teamwork, strengthening end-to-end DevOps and cloud engineering skills.
